Education

Adamson University

Bachelor of Science in Computer Science

Manila, PH

Aug. 2023 – May 2025

Minghsin University of Science and Technology

Bachelor of Science in Computer Science and Information Engineering

Hsinchu County, TW

Sept. 2025 – June 2027

Awards

JISSA CTF: Hack The Beat

Quezon City, PH

4th place – Adamson University Representatives

Feb. 2025

- Competed in a 3-member team, specializing in forensic steganography challenges involving hidden data extraction from multimedia files.
- Analyzed and decoded concealed data using tools such as Steghide, foremost, and binwalk.
- Performed audio steganalysis by inspecting spectrograms and recovering embedded signals using Sonic Visualiser and Audacity.

Projects & Experiments

HoneyClaw

Hsinchu County, TW

Ongoing Special Project

March – June 2026

- Architecting a sandbox network with multiple hosts and isolated Proxmox honeypot environments containing Ubuntu Server (DVWA/LAMP), Ubuntu Desktop, Windows Desktop (and Server), to simulate attack chains, including reconnaissance, web app exploits, and lateral movement.
- Engineering telemetry pipelines to route system and network logs into an AI Agent (OpenClaw) to benchmark its log normalization, threat correlation, and automated narrative generation for SOC analysts.

Reverse Engineering Exploration of Unity iOS Application

Hsinchu County, TW

Experiment

November 2025

- Explored reverse engineering by unpacking an iOS IPA file and inspecting its internal structure (Unity assets and compiled C# components).
- Attempted to analyze application behavior related to in-app functionality, but was unable to fully trace execution flow.
- Used tools such as Ghidra and VS Code for static inspection and keyword searching.
- Gained a high-level understanding of static vs. dynamic analysis, and identified gaps in knowledge (e.g., assembly, runtime tracing).
